## PROFESSIONAL SUMMARY

Full-Stack Developer with 4+ years building production systems across fiscal-compliance SaaS, fintech, and real-time platforms for clients in the UK, Spain, and Nigeria. Works in TypeScript monorepos with NestJS, Next.js, and PostgreSQL — contributed to SOAP-based Spanish tax authority integrations, a deterministic fiscal engine for VAT returns, real-time ride-hailing state machines with GPS fare settlement, and a fintech installment payment platform with Paystack split transactions. Delivered measurable outcomes: 300+ MAU platforms, 40% reduction in scheduling overhead, sub-cent VAT rounding precision. Currently seeking a remote mid-level full-stack or backend role where engineering culture is strong and the work is real.

## TECHNICAL SKILLS

- Languages:** TypeScript (ES2022+), JavaScript (ES6+), Python, SQL
- Frontend:** React.js, Next.js 14–16 (App Router), React Native, Tailwind CSS, Framer Motion, recharts, SWR, Capacitor
- Backend:** Node.js, NestJS, Fastify, Express.js, REST APIs, GraphQL (Apollo), WebSockets (Socket.io), JWT, Better Auth, RBAC
- Databases:** PostgreSQL, Prisma ORM, Redis, MongoDB, Supabase, Kysely
- DevOps & Testing:** Docker, GitHub Actions CI/CD, AWS S3, Vercel, Netlify, Jest, Playwright, Supertest, Testcontainers
- Architecture:** Monorepo (Turborepo/pnpm), Multi-Tenant SaaS, Event-Driven Architecture, OpenAPI/Swagger, SOAP, MCP, RAG Pipelines, Vector Embeddings
- AI/LLM in Workflow:** Daily use of GitHub Copilot, Claude, and GPT-4 for code generation, test writing, refactoring, and debugging across the full stack. Built RAG-powered semantic search and contextual Q&A with LangChain and pgvector.

## PROFESSIONAL EXPERIENCE

- Full-Stack Developer** · ADP Digitek / AINVID CODING S.L. · Remote (Palma, Spain) Jan 2025 – Present  
*Stack: TypeScript · NestJS · Fastify · GraphQL · PostgreSQL · Prisma · Turborepo · pnpm · Docker · Playwright · AWS S3/KMS · SOAP*
- On the engineering team for Multifactu, a fiscal-compliance invoicing platform for Spanish SMEs. TypeScript monorepo (Turborepo/pnpm) with a NestJS + Fastify dual-platform API and Next.js 16 frontend.
  - Contributed to the AEAT Modelos integration — REST/SOAP adapters for Spanish Tax Agency submission (presBasicaDos, servaliDos, consultaExt) with exponential-backoff retry, circuit breaker, and TLS client certificate handling via S3 + KMS
  - Built features in the Deterministic Fiscal Engine for Model 303 VAT returns — line-by-line computation from invoices or aggregate values with rate-by-rate breakdown and 0.02€ tolerance threshold
  - Worked on Verifactu invoice lifecycle (submit/correct/cancel) in realtime and deferred modes, QR verification against AEAT, signed PDF generation
  - Helped maintain TicketBAI regional compliance module for Basque territories (Bizkaia, Gipuzkoa, Araba)
  - Wrote API endpoints, GraphQL resolvers, OpenAPI documentation, and Playwright E2E test suites as part of the team's release cycle
  - Contributed to Docker-based CI/CD pipelines and collaborated on code reviews, sprint planning, and cross-timezone async communication
- Full-Stack Developer** · Bica Driver 2026 – Present  
*Stack: TypeScript · React Native · NestJS · PostgreSQL · Prisma · Socket.io · Redis · Monnify API · Capacitor · FCM · Zustand*
- Built a real-time ride-sharing PWA (React Native + Capacitor) with a NestJS backend serving driver, owner, and admin roles
  - Designed the ride state machine (10 statuses) with API-level transition validation
  - Implemented a 3-zone pricing engine (short/fast fixed rate, short/slow with traffic penalty, standard meter) with nearest-50-Naira rounding and rate snapshotting at trip creation
  - Built GPS-based fare settlement with 3-tier fallback: Google Roads API → Haversine → estimate. GPS accumulated in Redis via 1s-throttled WebSocket location stream
  - Developed OTP ride verification — 4-digit PIN with 5-attempt lockout, 60s Redis rate-limit on regeneration, brute-force protection
  - Built driver rating system with automated enforcement — rating thresholds trigger 72hr or 30-day suspensions with full audit logging
  - Integrated Monnify payments — split transactions, SELECT FOR UPDATE row locking, 10-min reconciliation cron, orphaned transaction recovery
  - Built namespaced Socket.io gateway (/rides) with JWT-verified role-based rooms for real-time driver location, trip status, and FCM push notifications
- Full-Stack Developer** · Martínez & Company · Remote (Spain) Jun 2024 – Dec 2024

Stack: [React.js](#) · [Next.js](#) · [TypeScript](#) · [Tailwind CSS](#) · [PostHog](#) · [WhatsApp API](#) · [Telegram Bot API](#) · [Vercel](#)

- Built a GDPR-compliant website for a European grant consultancy, delivered on schedule
- Integrated PostHog analytics with a custom waitlist funnel, enabling conversion visibility from launch
- Built QR-based lead capture forms with WhatsApp and Telegram Bot API integrations
- Earned a direct referral to ADP Digitek based on delivery quality

**Web Developer** · Talent Group Services · Remote (Bedford, UK)

Jan 2022 – May 2024

Stack: [React.js](#) · [Next.js](#) · [TypeScript](#) · [Node.js](#) · [PostgreSQL](#) · [Vercel](#)

- Built a booking platform from scratch as the sole developer, scaling to 300+ monthly active users
- Eliminated 40% of manual scheduling work with a self-serve client booking system
- Optimized PostgreSQL queries and API endpoints, reducing average response time by 35%
- Handled end-to-end production operations: deployment, monitoring, incident response

**Freelance Full-Stack Developer** · Self-Employed · Remote (Lagos, Nigeria)

Feb 2021 – Present

Stack: [TypeScript](#) · [Next.js](#) · [NestJS](#) · [PostgreSQL](#) · [LangChain](#) · [pgvector](#) · [OpenAI API](#)

- Delivered 10+ production projects across SaaS dashboards, e-commerce platforms, and mobile apps for Nigerian and international clients
- Built [temi.dev](#) — a full-stack SaaS platform with a RAG-powered blog system ("Ask this article" contextual Q&A), AI lead scoring engine, and service booking layer
- Architected a multi-tenant monorepo with Turborepo, shared UI package, and PostgreSQL with Prisma ORM

## FEATURED PROJECTS

### [temi.dev](#) — Personal SaaS Portfolio Platform

[Next.js](#) · [NestJS](#) · [PostgreSQL](#) · [LangChain](#) · [pgvector](#) · [OpenAI API](#) · [Turborepo](#) · [Framer Motion](#)

- Full-stack platform with portfolio showcase, AI-generated blog, lead management, and admin analytics — deployed as a Turborepo monorepo with shared package
- Engineered a RAG-powered blog system with "Ask this article" contextual chat, AI-generated summaries, and pgvector-backed semantic search using LangChain and OpenAI embeddings
- Built an AI lead scoring engine that prioritises inbound contacts by deal likelihood and generates personalised outreach drafts

[temitope.live](#) · [github.com/TemitopeRekun/temi.dev](https://github.com/TemitopeRekun/temi.dev)

### [Lopay](#) — School Fee Installment Payment Platform

[TypeScript](#) · [NestJS](#) · [PostgreSQL](#) · [Prisma](#) · [Paystack API](#) · [Better Auth](#)

- Fintech platform enabling Nigerian parents to pay school fees in flexible installments with guaranteed traceable disbursements to schools
- Built payment calculation engine using a kobo-safe Money value object — zero floating-point drift across all financial math
- Implemented installment plans (12-week or 3-month) with 25% deposit minimum, 2.5% platform fee, and rounding-absorbed final installment so schedules sum exactly
- Integrated Paystack split payments with fee gross-up, subaccount routing, and idempotent processing via idempotencyKey
- Designed the payment lifecycle (PENDING → ACTIVE → COMPLETED / DEFAULTED / FAILED) with full audit trail recording before/after snapshots on every financial event
